Explanation

7 comfort zones. The body is properly supported in the head, shoulder and lumbar regions, as well as the hips and legs. This allows the spine to be in a correct physiological position.

OEKO-TEX® STANDARD 100 identifies quality products with verified quality. It marks products that do not harm humans or the environment with their ingredients. All our mattress covers are OEKO-TEX® certified.

Cover fabric Aloe Vera OEKO-TEX. The fabric of the cover treated with Aloe Vera extracts is pleasantly soft, breathable and quilted. If the cover is removable, it can be washed at 40°C and machine-dried using a delicate laundry programme.

The anti-allergic fabric of the Silver 100% PES - OEKO-TEX cover is pleasantly soft, breathable and quilted. If the cover is removable, it can be washed at 40°C and machine-dried using a delicates laundry programme. Silver binds pathogenic particles, which is why the cover is particularly suitable for more sensitive sleepers.

Bamboo anti-allergic fabric (2% bamboo, 98% PES) OEKO TEX. The anti-allergic fabric is snug and soft, breathable and quilted into a fixed lying surface.

TERMOFIL-OEKO-TEX anti-allergic air filling. The Termofil wool softens the surface of the mattress, allows air to flow and thus wicks moisture away from the mattress; it gives a pleasant feeling of freshness in the summer and a feeling of warmth in the winter.

The cotton-wool blend further softens the surface and increases the feeling of comfort.

On the winter side of the mattress is a wool-wool blend that softens it and keeps us pleasantly warm in the winter. On the summer side is a cotton-wool blend that softens the lying surface and provides us with a pleasant feeling of freshness in the summer heat.

An insulating breathable fabric connects the materials of the lying surface into a fixed surface.

The needled cotton wool connects the springs on the lying surface and separates the suspension from the other fillings of the mattress.

A perimeter of profiled foam reinforces the core at the edges and prevents excessive subsiding of the peripheral springs and thus uncomfortable sliding towards the edge of the mattress.

All the mattresses are available in all firmness levels (S = soft, M = medium and H = a firm mattress).
